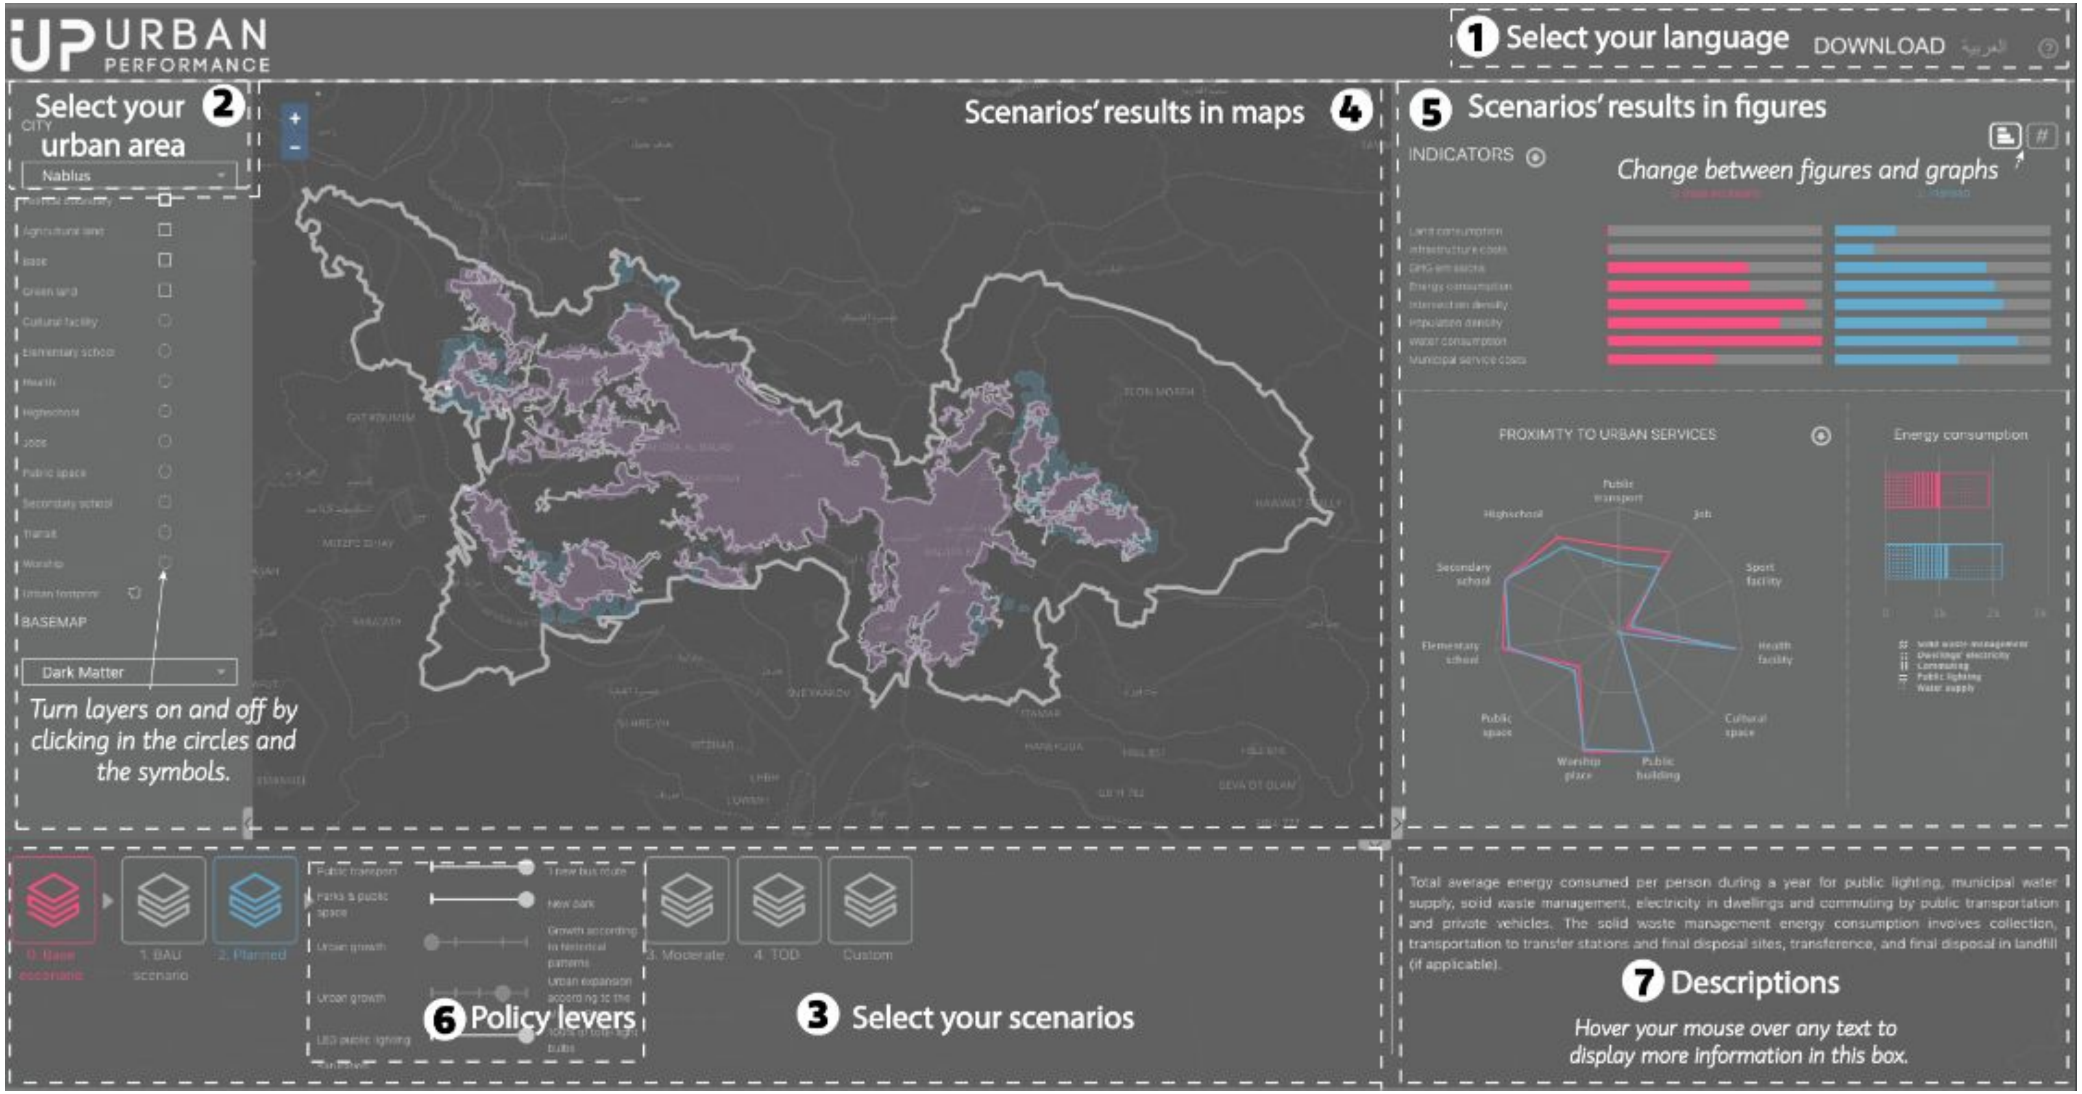
Deliverable 2: Visualization Tool

This document summarizes the main characteristics of the visualization tool that has been developed to display the results of the Urban Growth Scenarios for Palestine.

The name of this tool is Urban Performance Visualizer, or simply **UP Visualizer.**

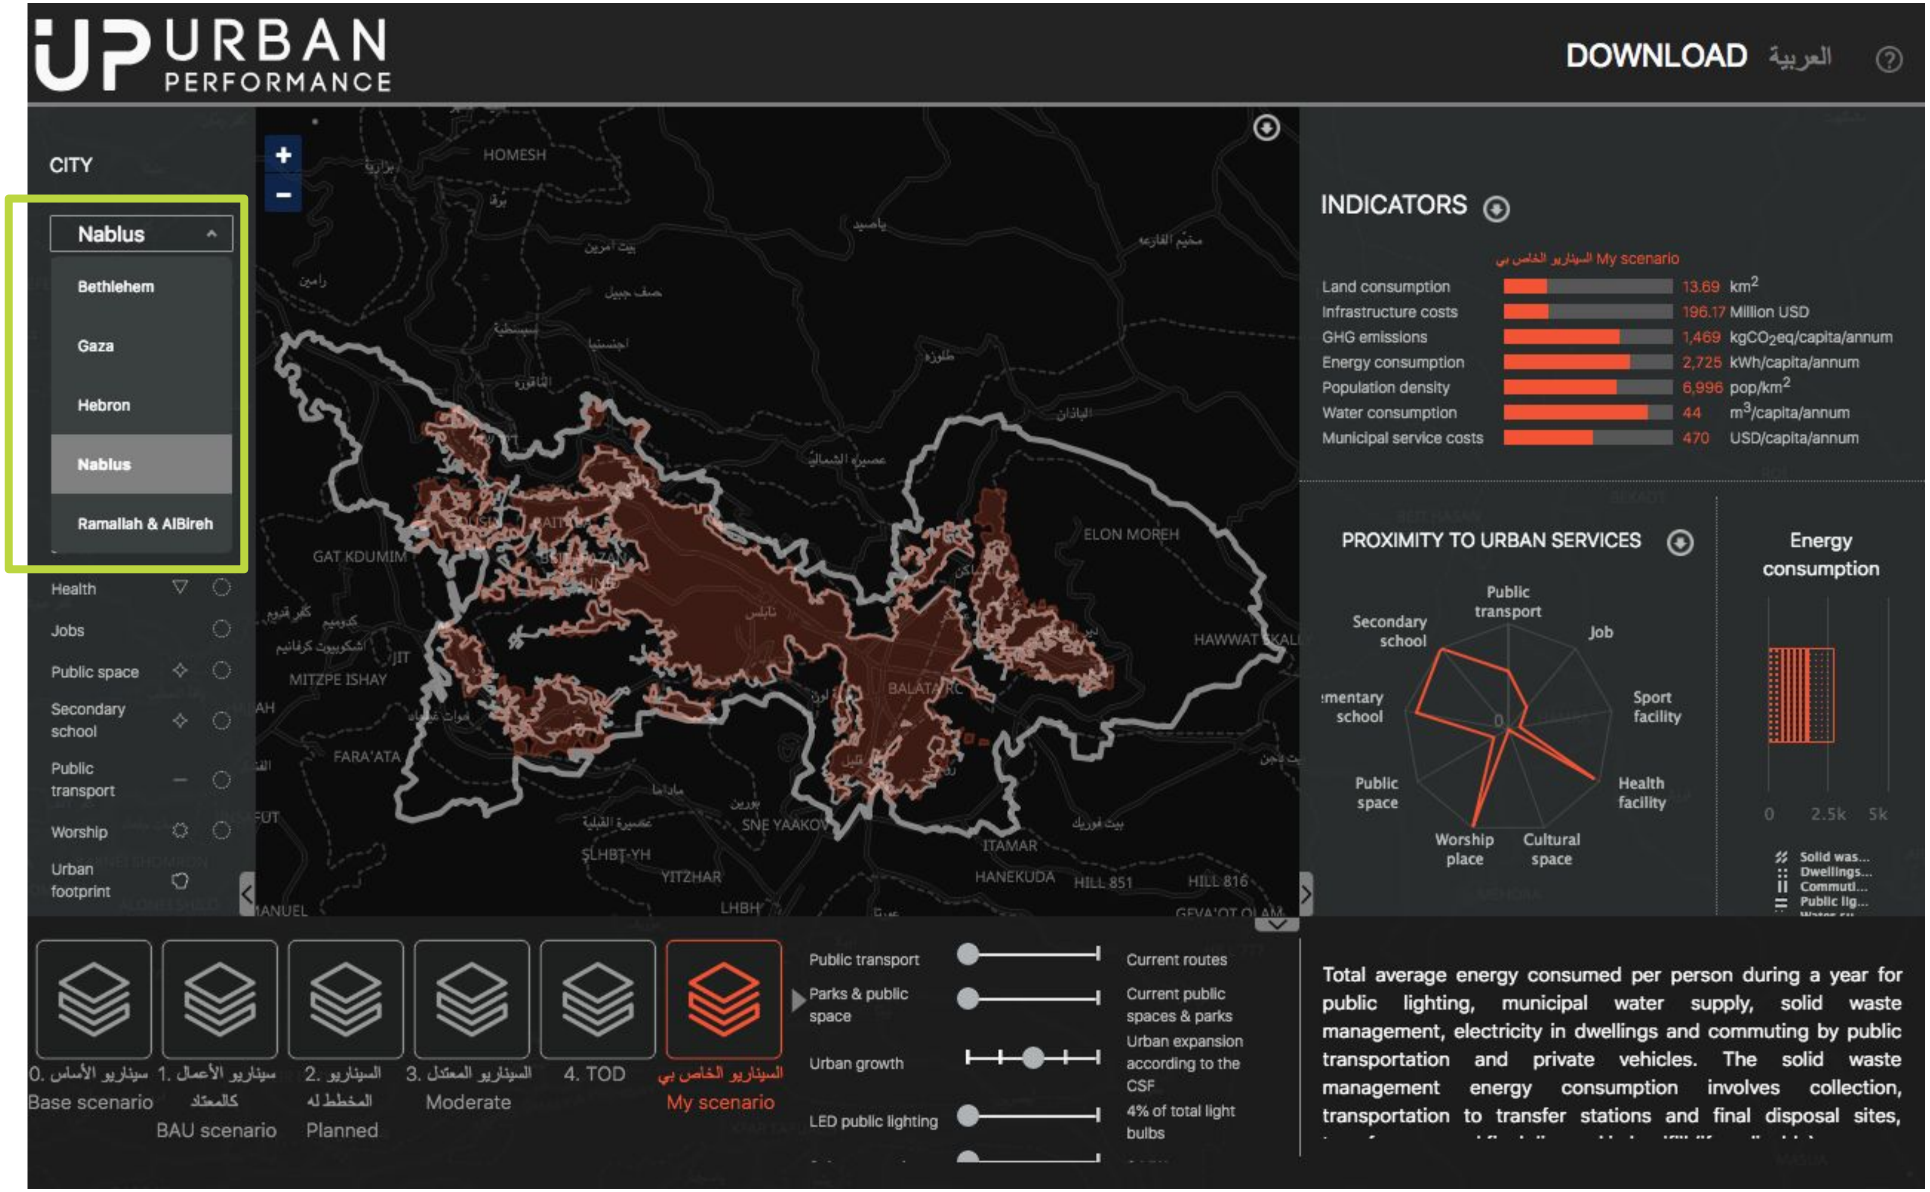
It is accessible through the link **www.urbanperformance.in/Palestine**

Basic instructions to use UP Visualizer are shown when you enter for the first time.

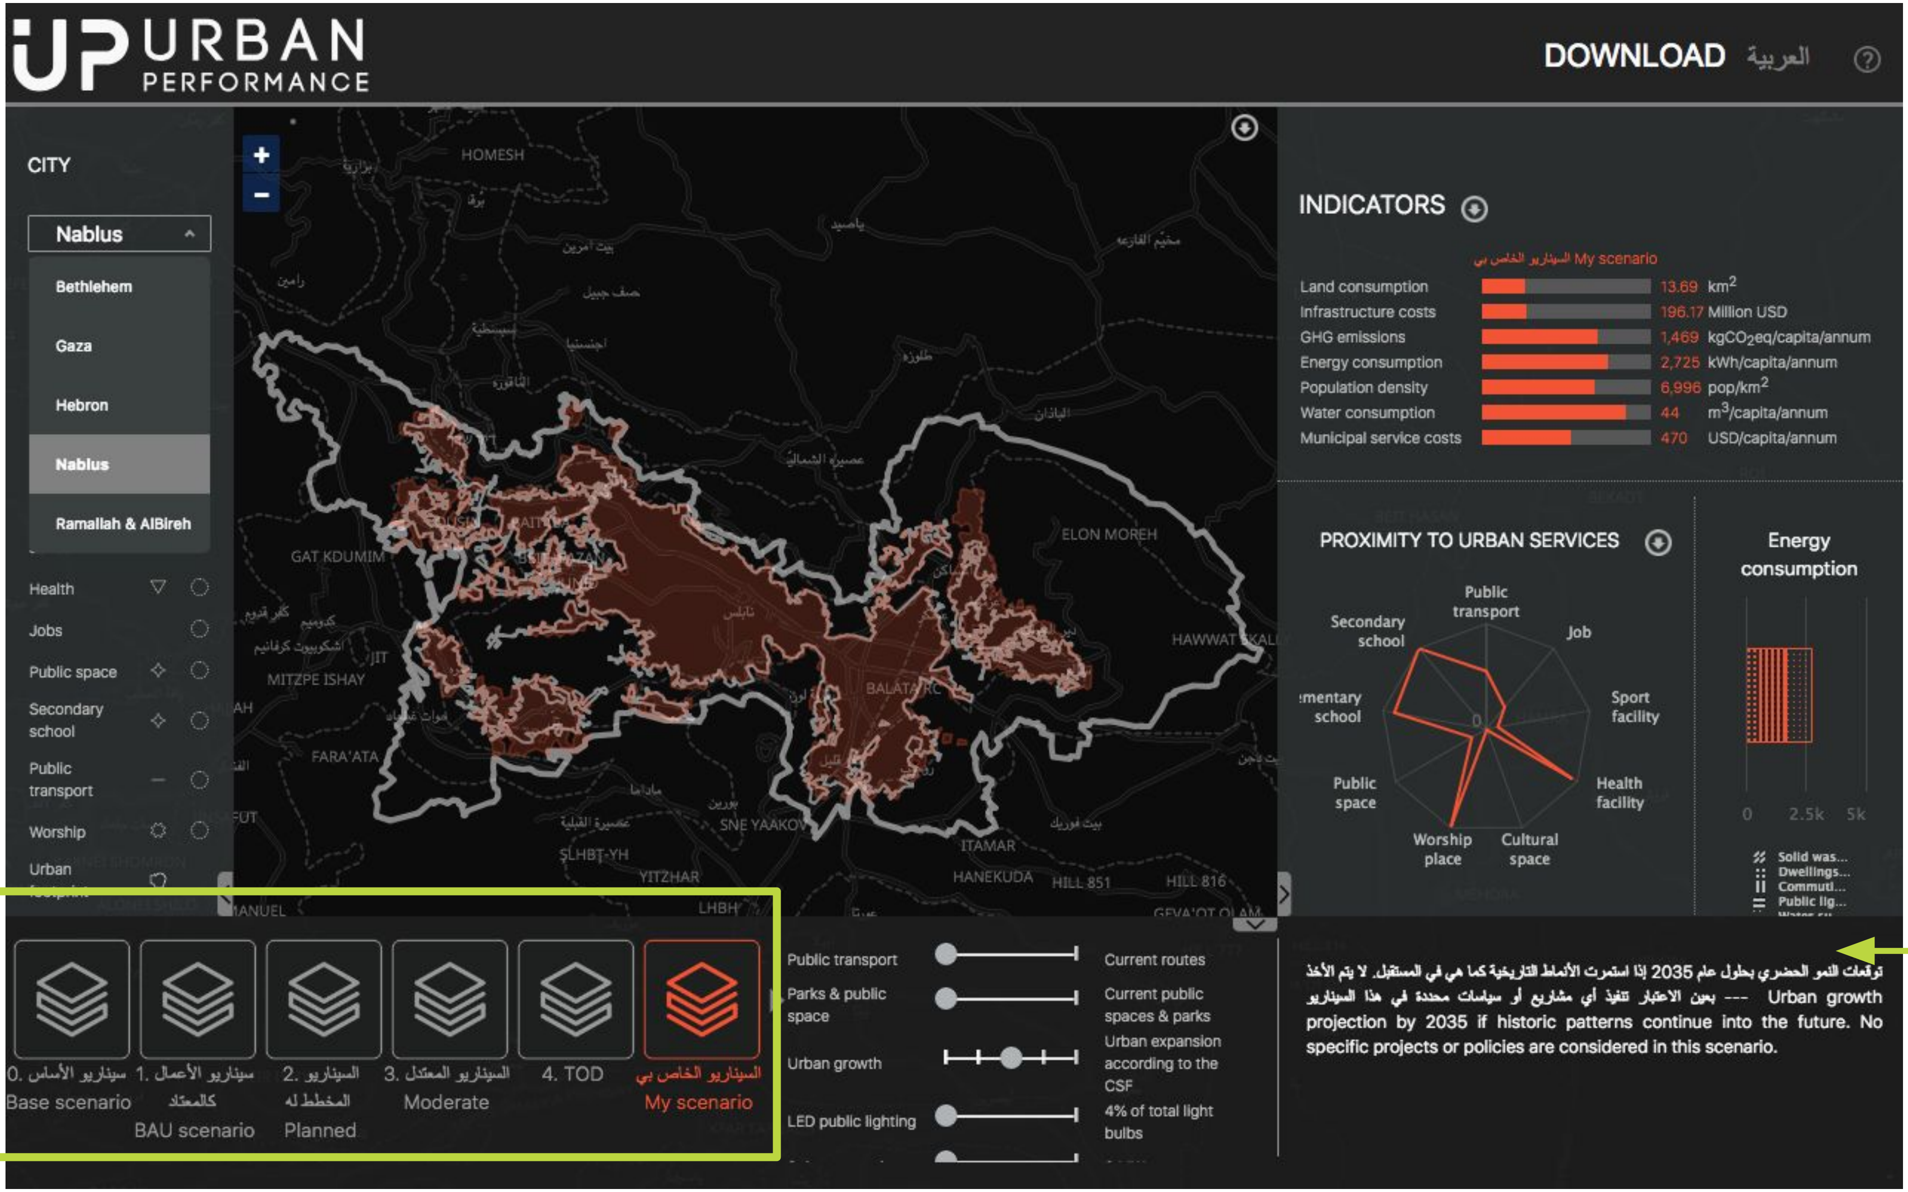


Choose the urban area

You can choose among the five urban areas included in this study.



Select the scenario you want to analyze

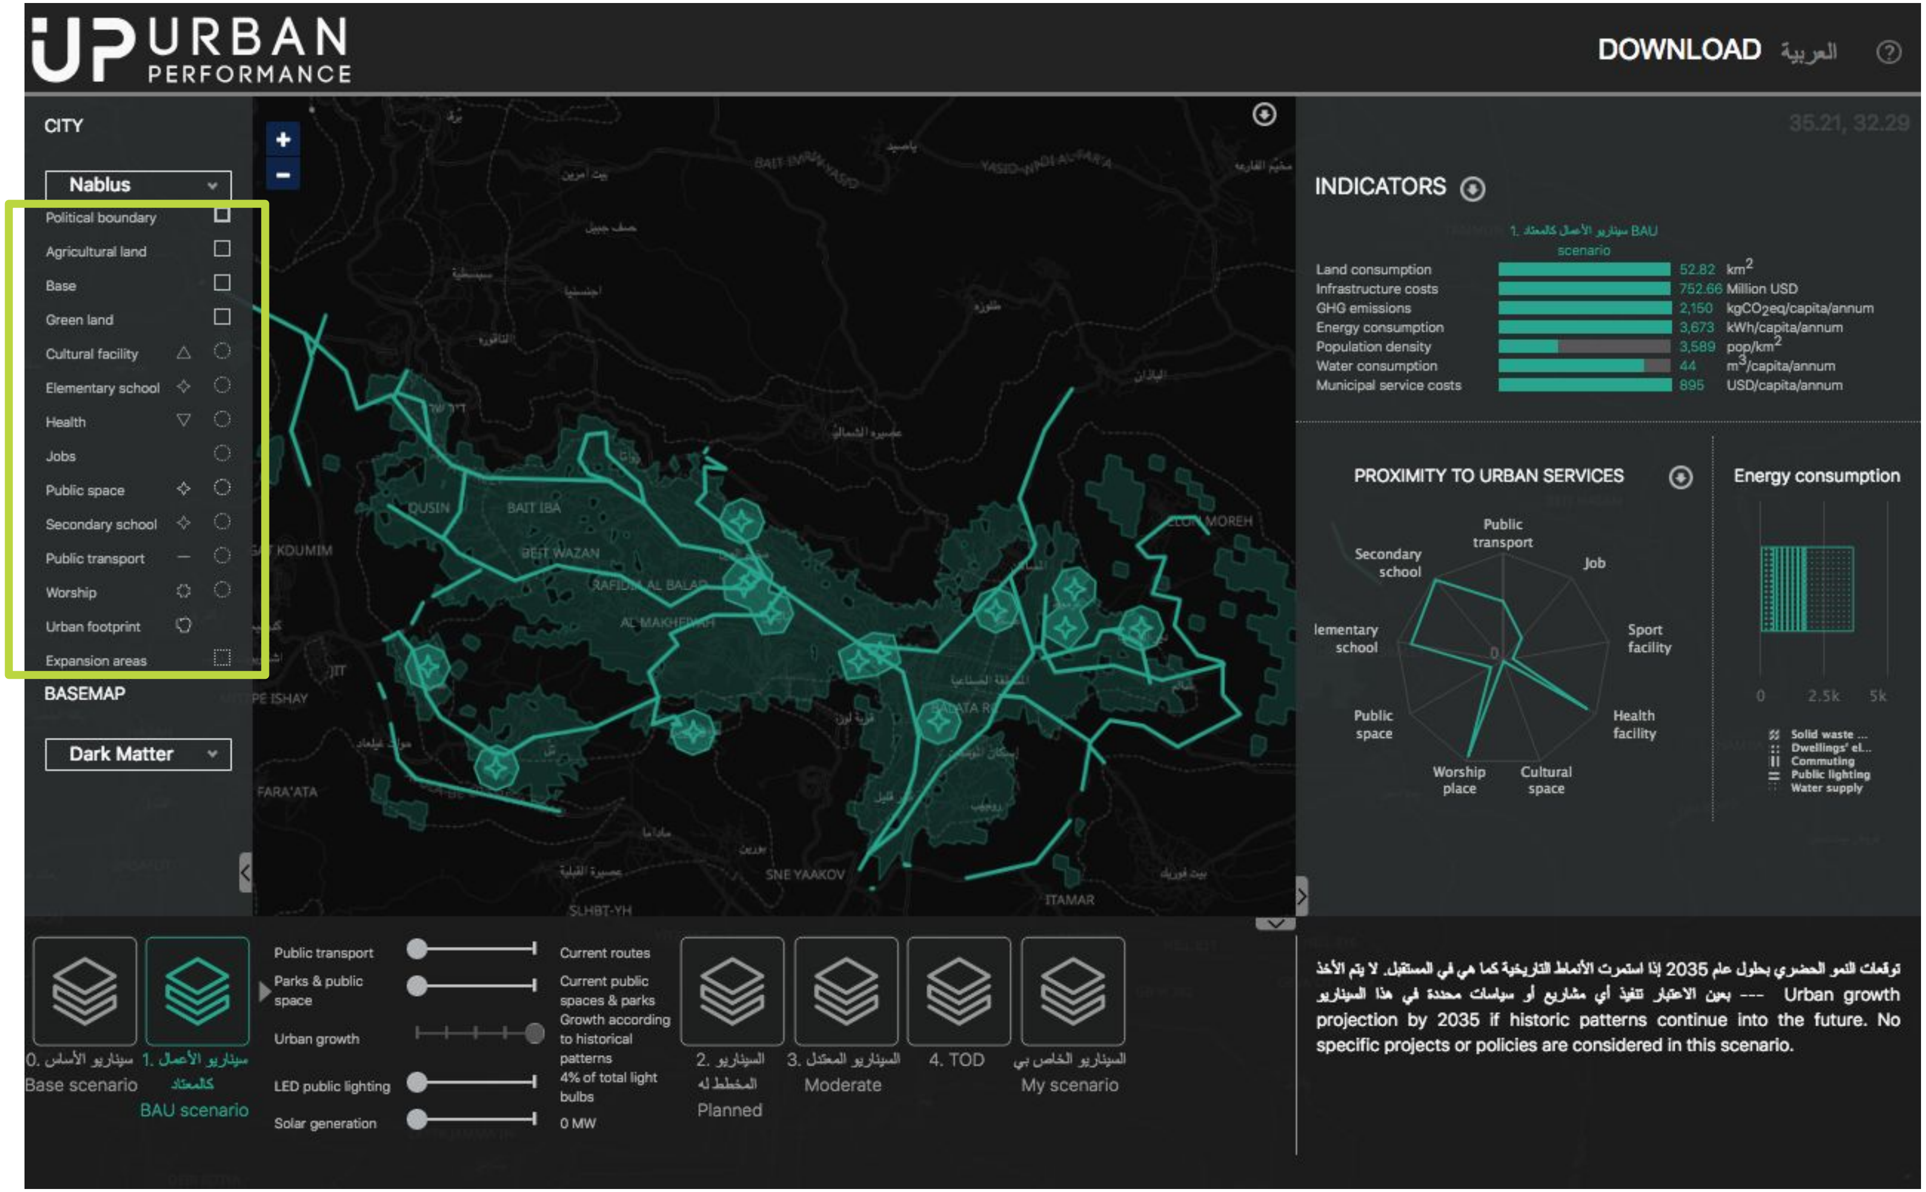


The scenarios you select will display in colors.

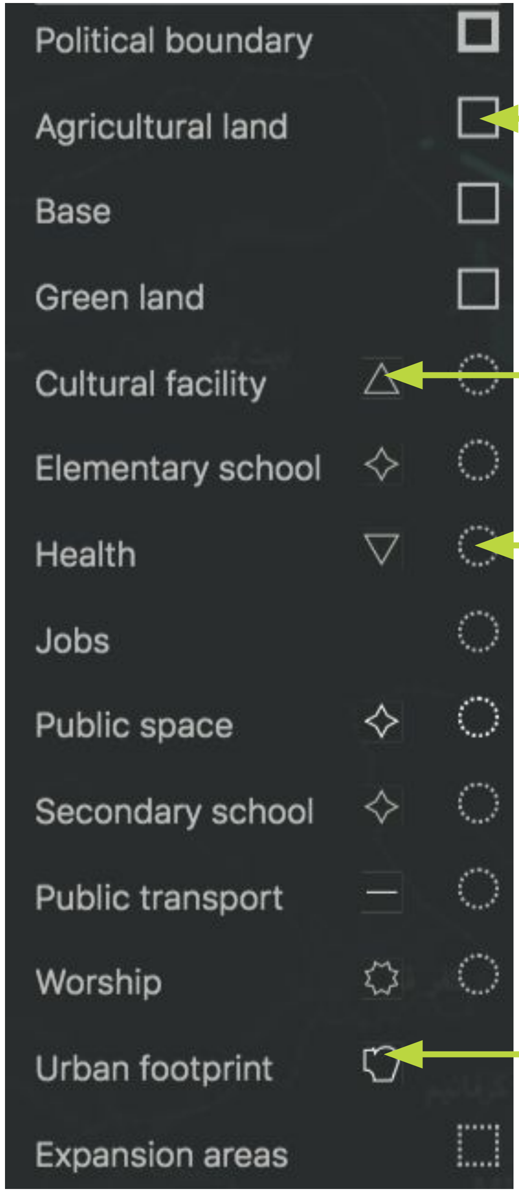
Hover your mouse over the names to read the description

Display information on the map

Control which information you want to display on the map by turning the layers on and off



Display information on the map



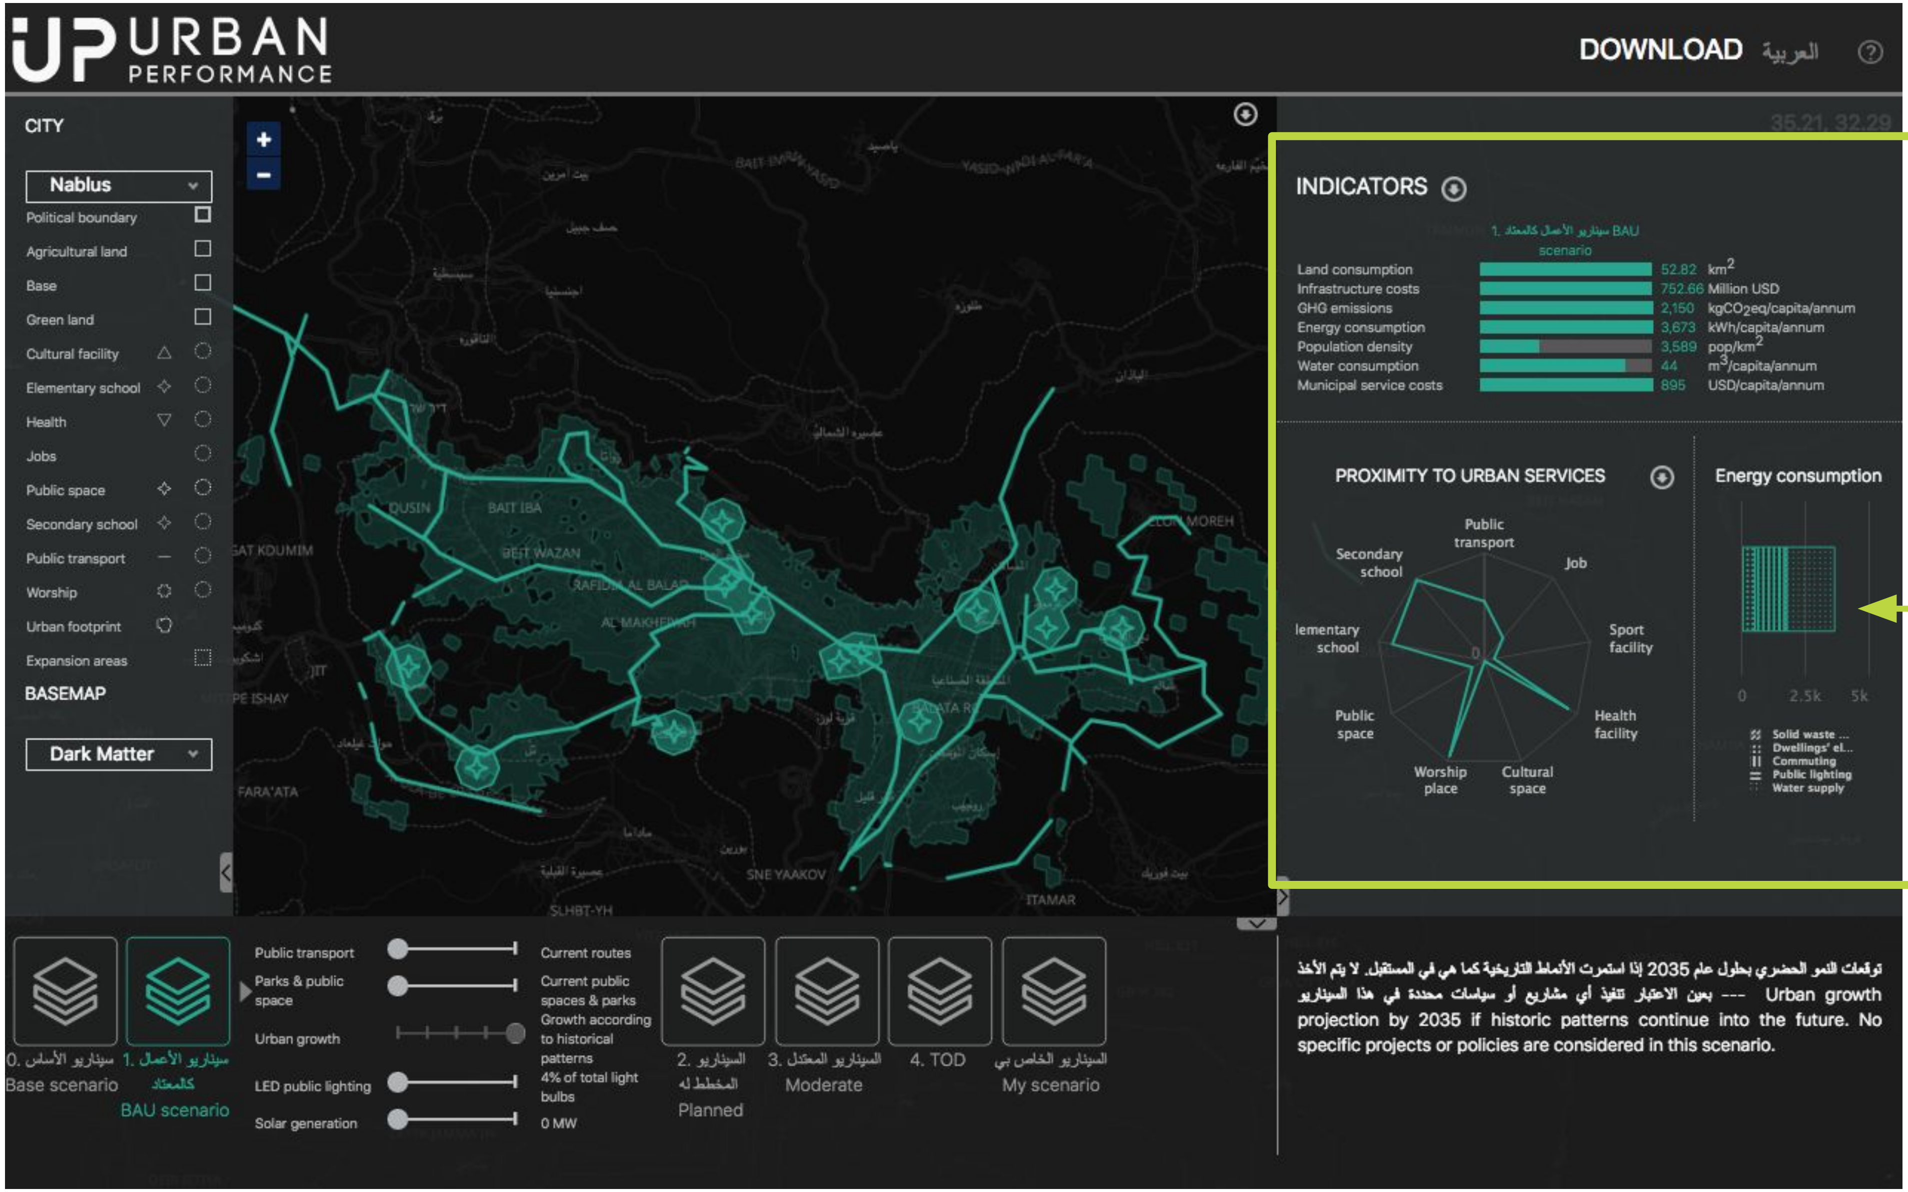
Click on the squares to show some useful boundaries on the map.

Click on the icons to show the location of the amenities on the map.

Click on the circles to display the areas within the service radio. You can see the distance used as service radio in the table 'criteria' that you can download.

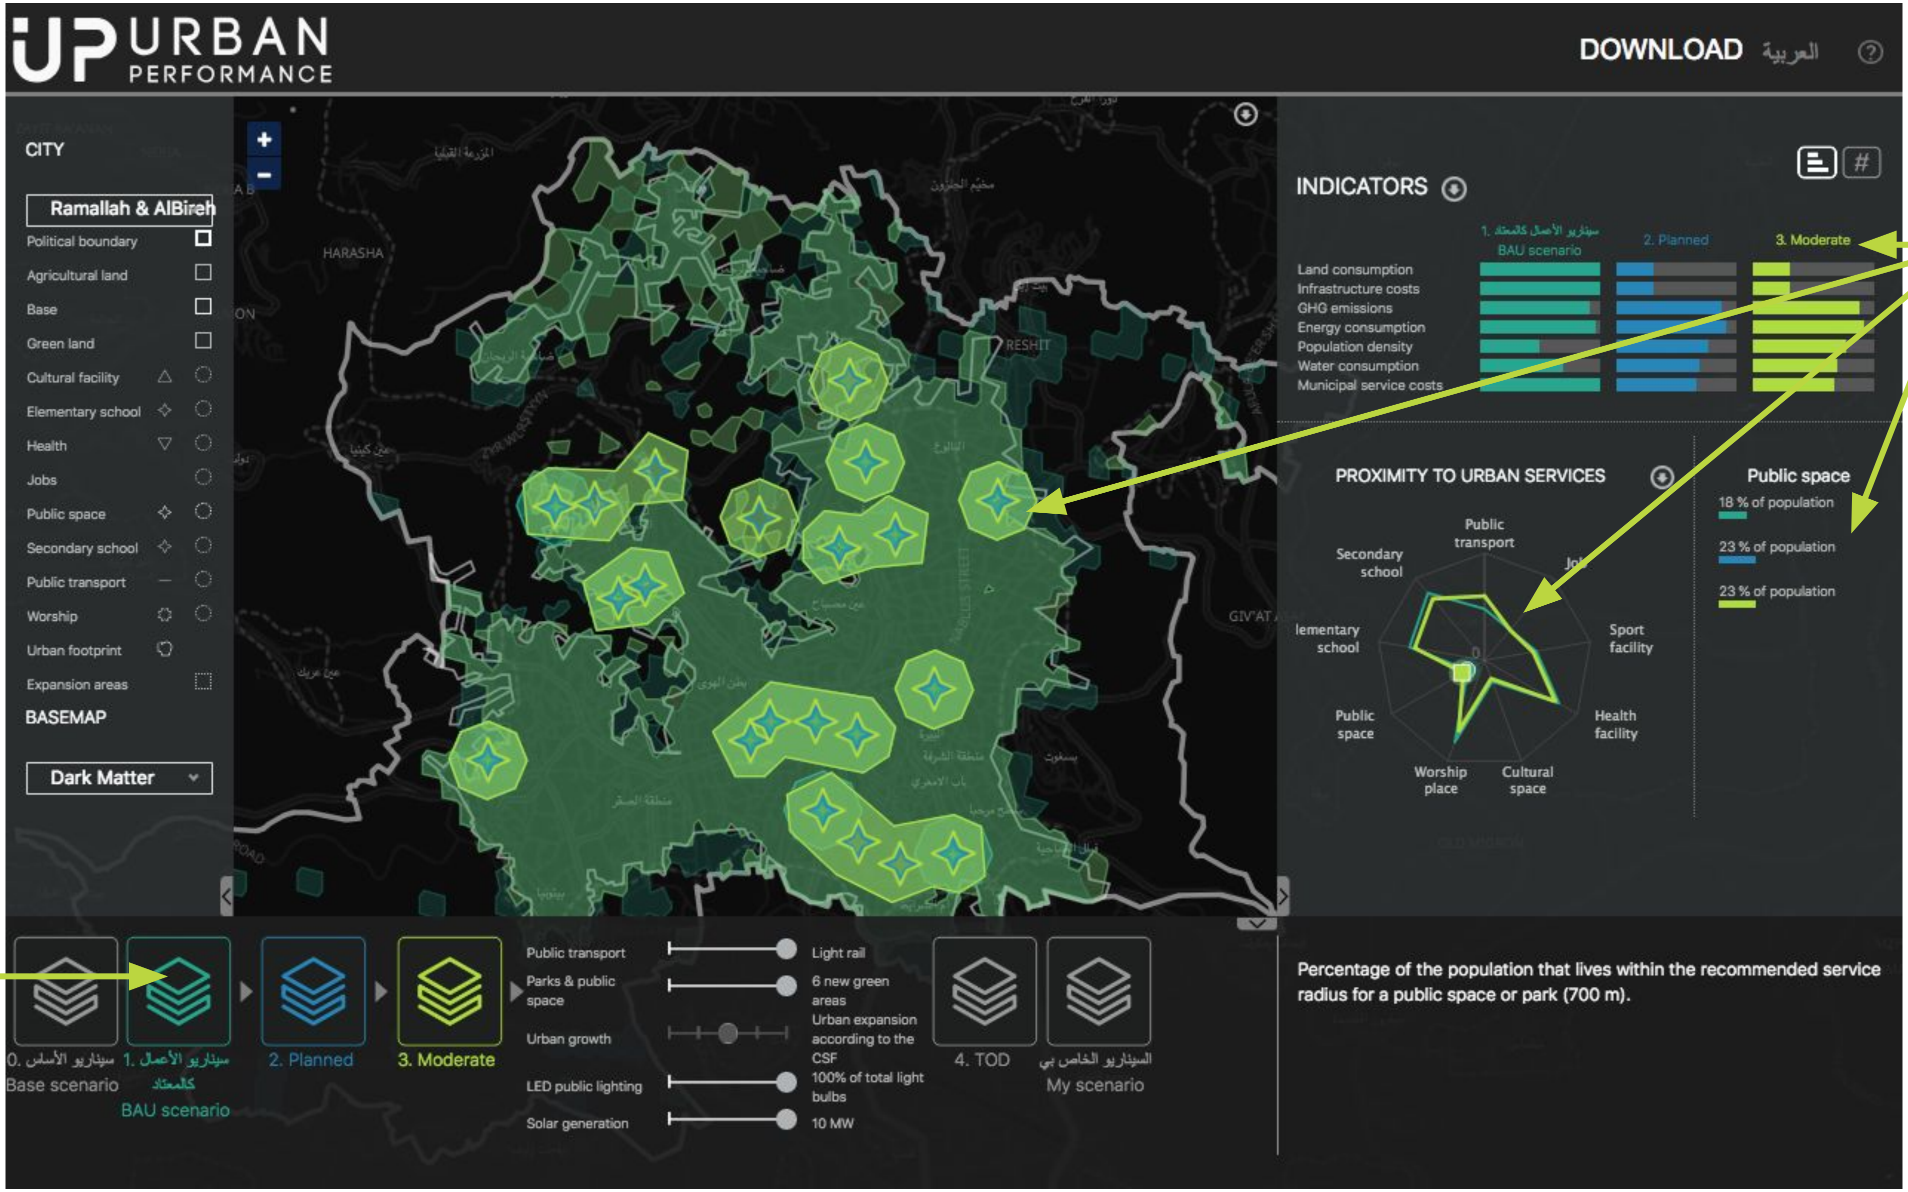
Click on the icon to show or hide the urban area's footprint

Analyze the scenario’s indicators



You can see more detail of each indicator in this section when you hover your mouse over the indicators.

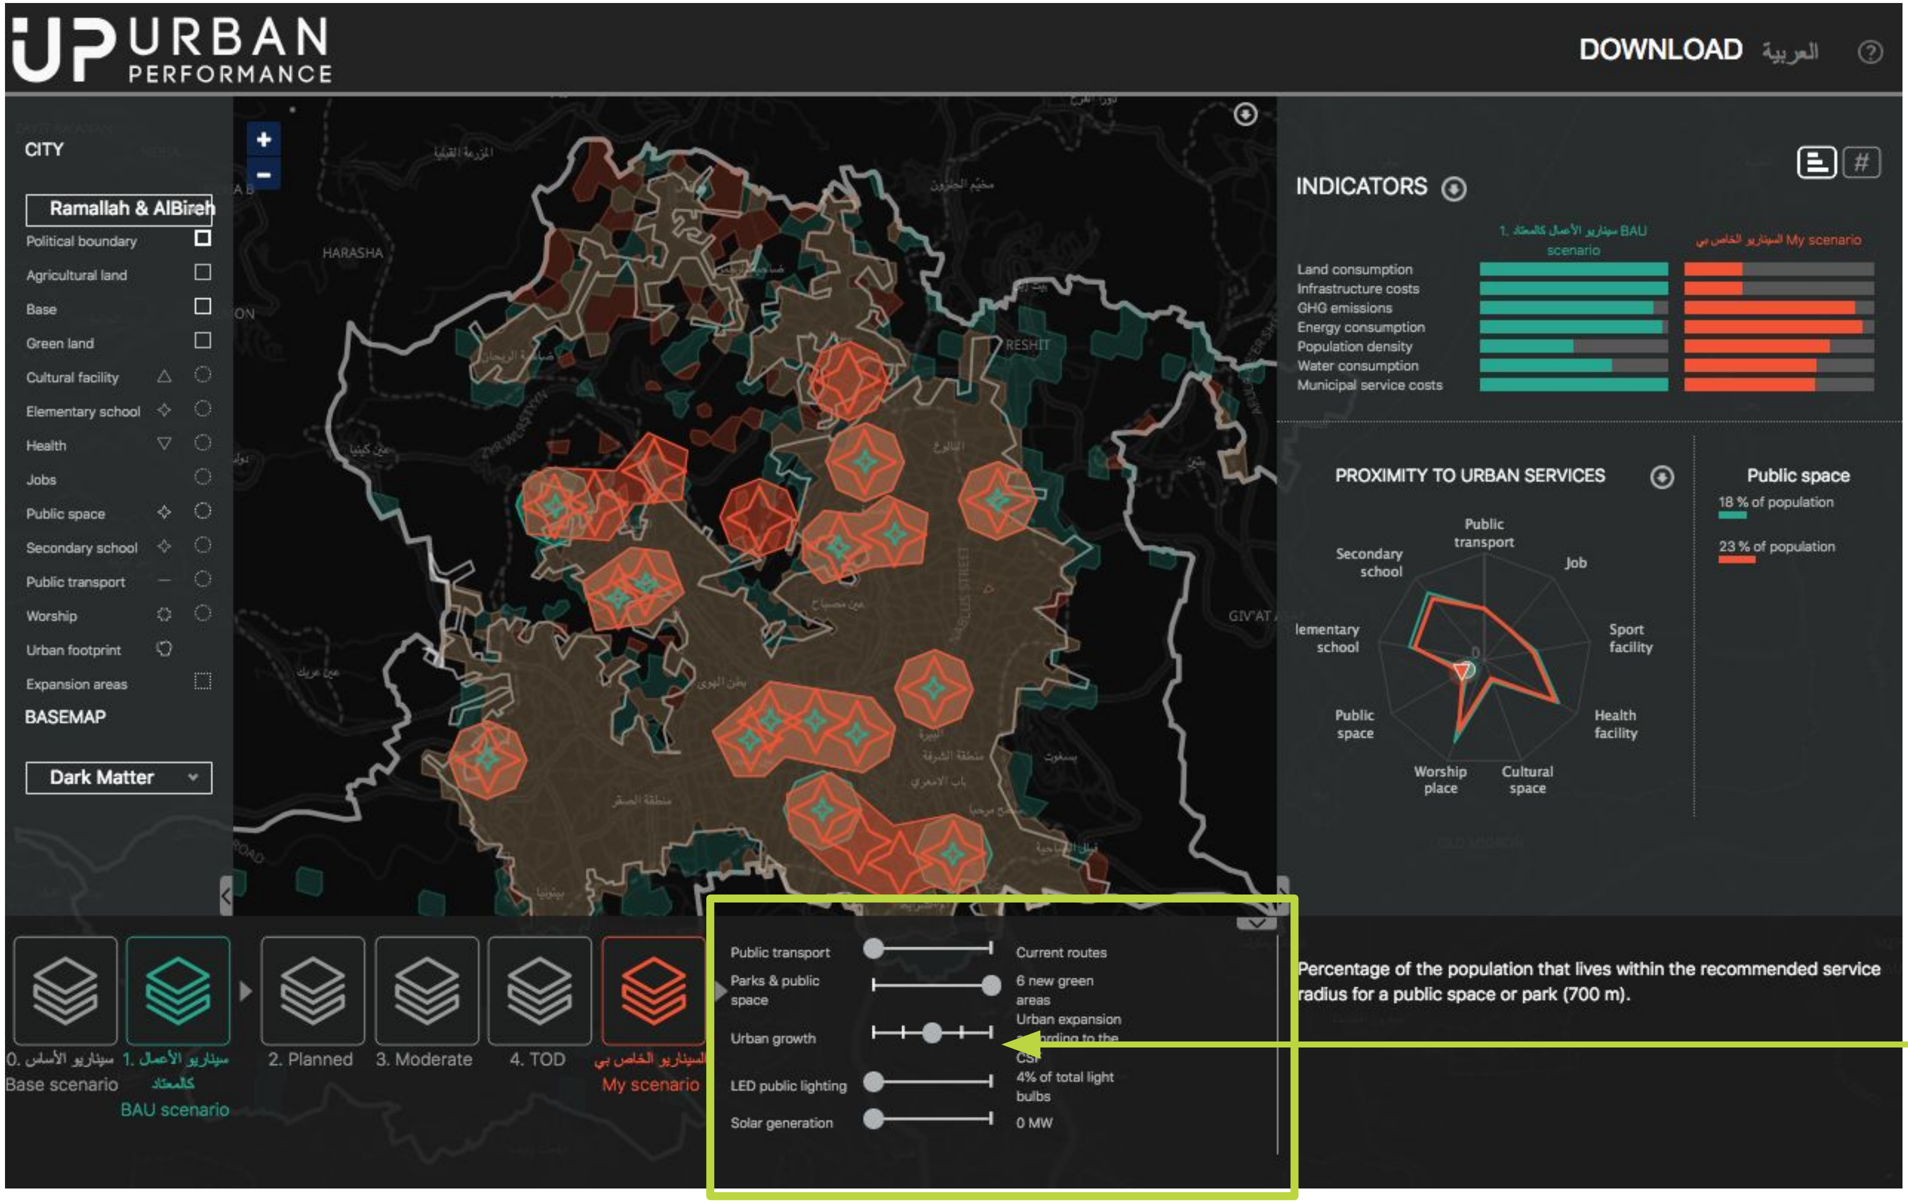
Compare several scenarios



The results will display in the color of each scenario.

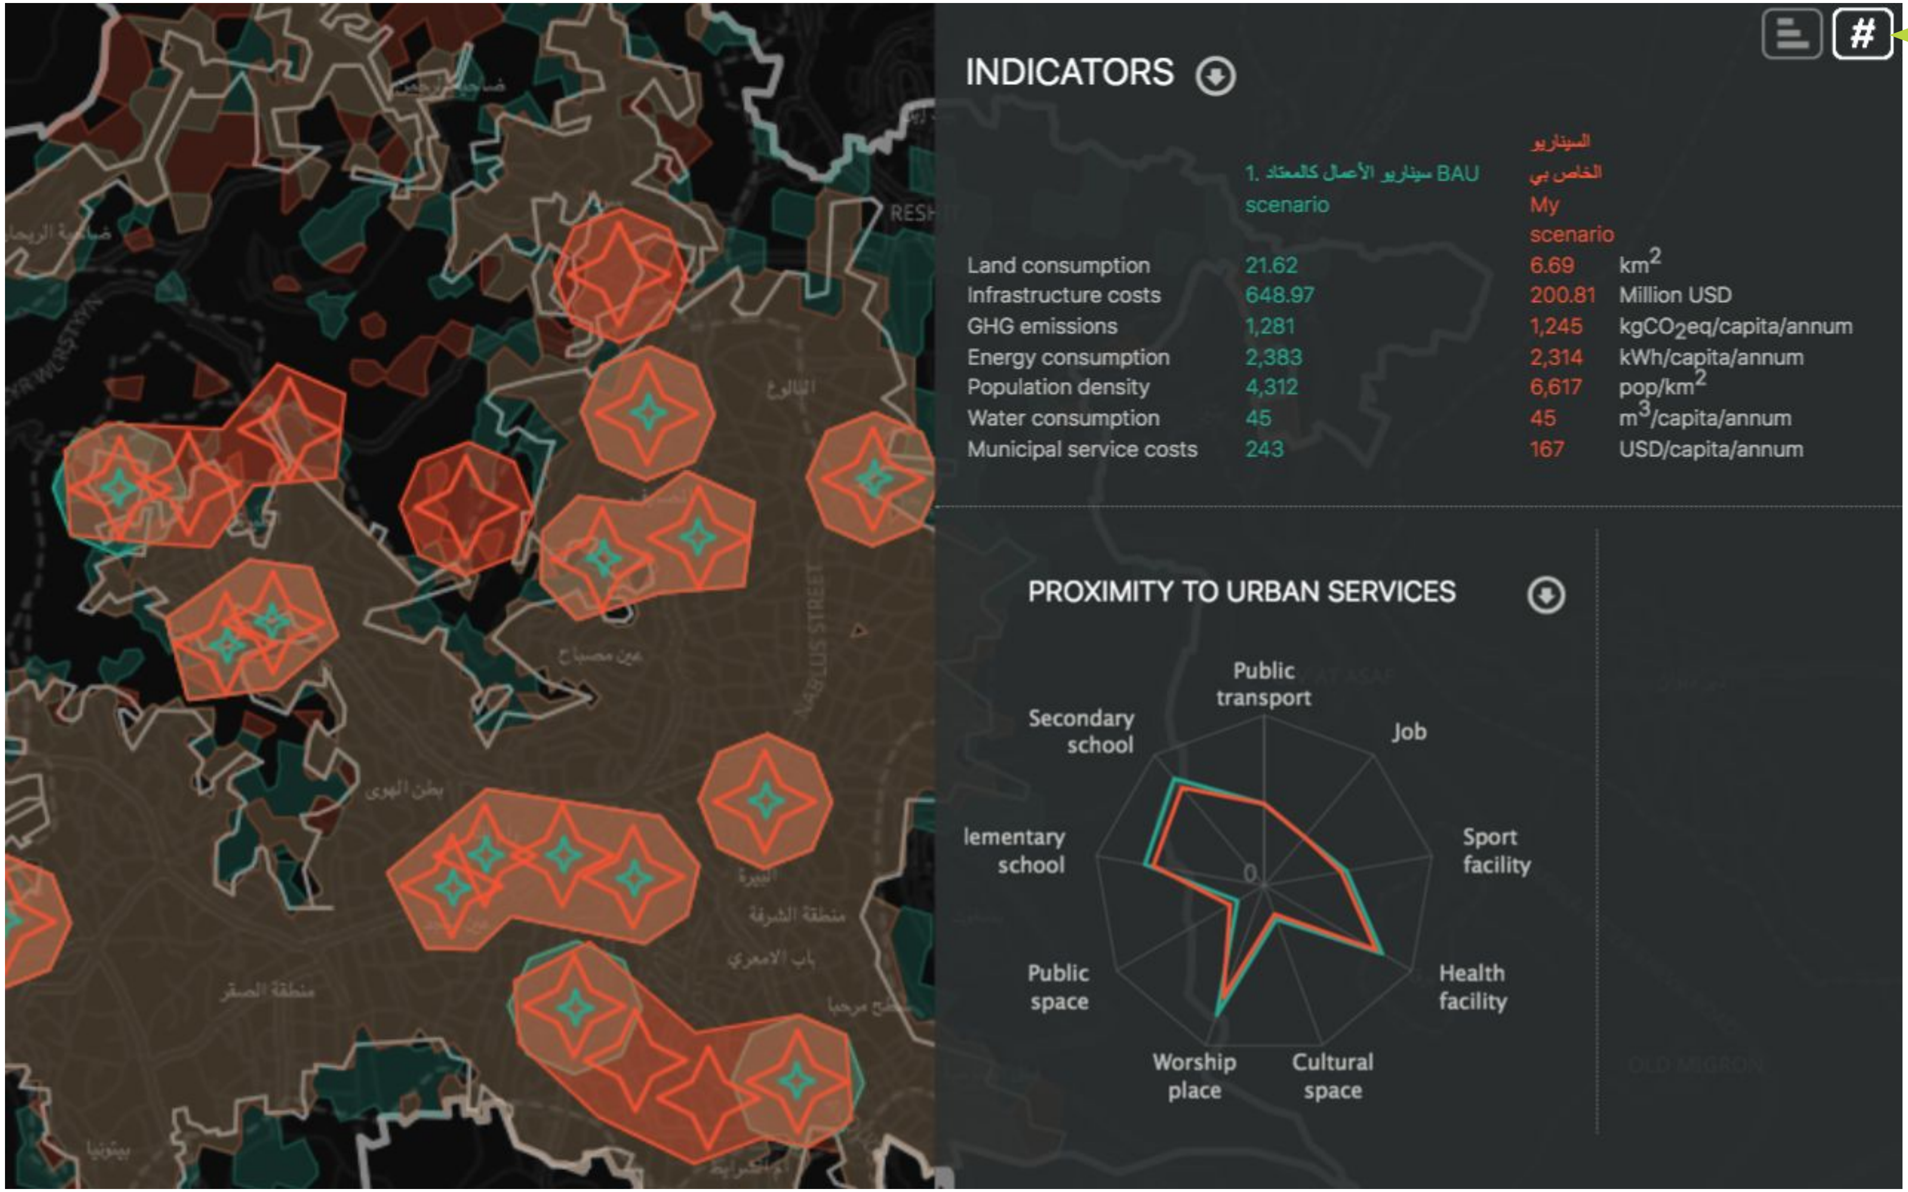
Click on the scenarios you want to compare. Each scenario will display in a different color

Modify the policy levers included in ‘My scenario’



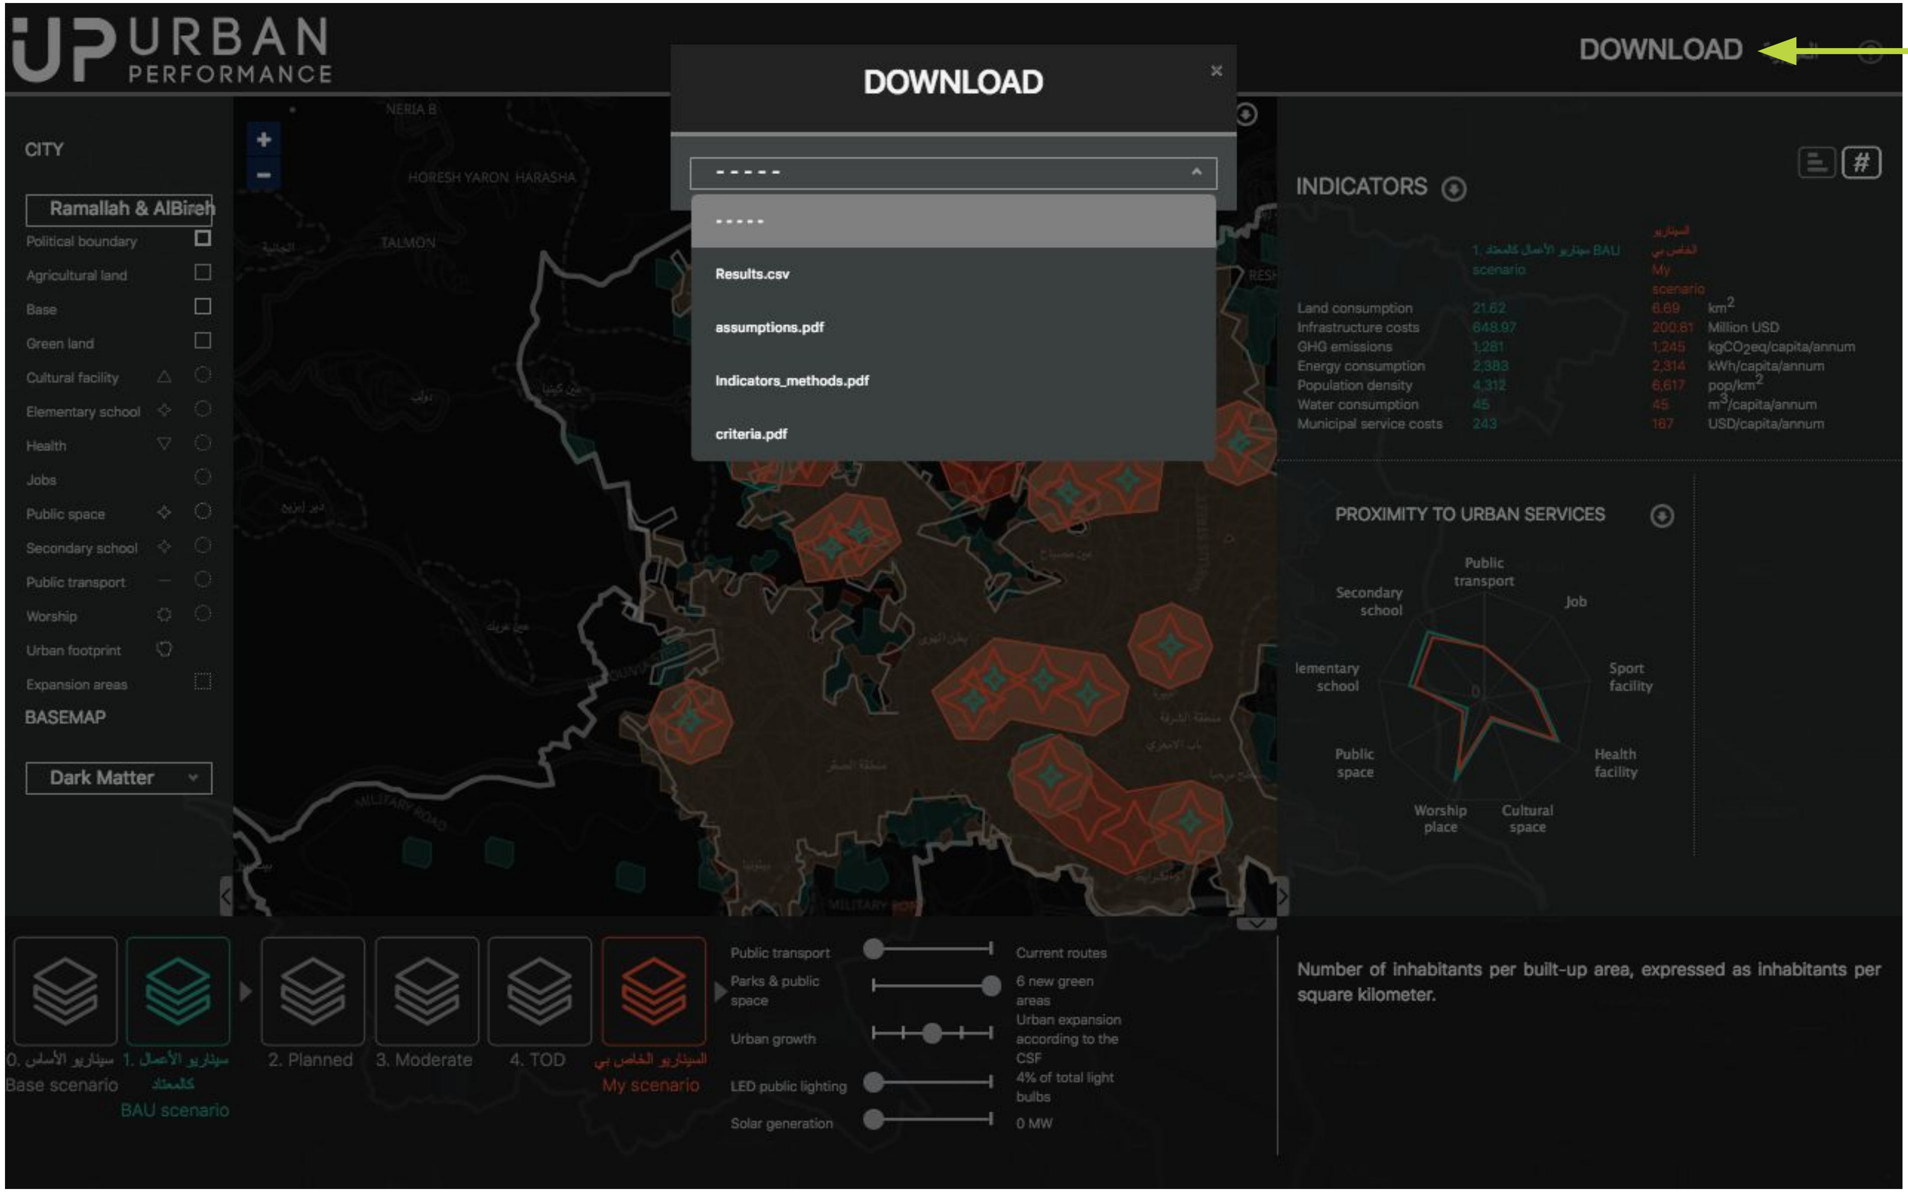
Click on the vertical lines to change the level of the policy lever.

Compare results on the map and with the indicators



Choose between bars and numbers to display the indicators

Download more information



Click download to display the documents you can download. These include the results as csv format, the criteria, assumptions and calculation methods used to obtain the indicators.
